Global Learning Assessment Case Study

Large Public State University

University Goal regarding Global Learning

Global education across the disciplines seeks to equip students with knowledge of the diverse peoples, governments, histories, and natural systems that comprise the world – and the forces that continue to shape them. It produces graduates who respect the many groups that make up a global society and who have skills and perspectives to meet the challenges of an interdependent world. As students learn to see the “global in the local,” global education allows students to understand how their own behavior affects and is affected by larger world patterns.

Learning Outcomes

Global Perspectives [knowledge]:
- Through the general education curriculum, students will demonstrate knowledge of world history, literature, regional geography, and economics.
- Students will demonstrate the ability to systematically acquire information from a variety of sources regarding diverse regions, countries, and cultures.
- Students will demonstrate an understanding of the interconnectedness of political, economic, and environmental systems.

Intercultural Communication/Cross-cultural Adjustment [skills]:
- Students will recognize individual and cultural differences and demonstrate an ability to communicate and interact effectively across cultures.
- Students will demonstrate awareness of their own values as well as their biases and how these influence interaction/relationships with others.
- Students will demonstrate flexibility, openness, empathy, and tolerance for ambiguity.

Social Justice and Sustainable Development [values]:
- Students will recognize the importance of diversity in globalization.
- Students will show how the behavior of individuals, groups, and nations affects others, in terms of human rights and economic well-being.
- Students will connect root causes of basic global problems (e.g., population growth, poverty, disease, hunger, war, and ethnic strife) to issues of land use and access to natural resources (e.g., clean air and water, biodiversity, nutritious food sources, minerals, and energy).

Large Public State University has chosen to approach global learning in a comprehensive way through curricular and co-curricular activities and programs.
How will your assessment team align the above goal and objectives with direct and indirect measures to assess global learning on your campus?

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

Why did you choose those methods? Have appropriate measures been chosen to measure students’ knowledge, skills and attitudes?

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

How will you know if students have moved from lower-level thinking to higher-level thinking?

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________
Have you addressed other considerations (e.g. Use of reliable and valid methods, timing & cost associated with method, student motivation to respond to method, multiple measures, direct and indirect measures, qualitative and quantitative measures, who else do we need to involve?)
